

Katie Boucher, B.A., LEED AP Homes

Katie Boucher is an architectural designer and project manager involved in developing innovative designs, building interactive 3D models, updating building details as well as monitoring construction of high performance homes as part of the Building America Program. Through all phases of a project, Katie strives for the highest level of collaboration and communication between all involved disciplines.

Her work includes projects in many practice areas such as athletic, academic, commercial, retail, mixed-use and single-family residential. In many of these projects, Katie has been a part of both the design phase as well as the construction administration phase, being able to follow a project through from its inception to its introduction into the built environment.

As a professional, Katie has given back to the community by providing design services to local charities as well as taking part in Construction, an annual international design competition that supplies canned goods to local food banks.
