

Honorata Wytrykowska, B.Sc., LEED® AP

Honorata Wytrykowska, as an architectural designer at Building Science Corporation, assists project managers and engineers on a wide range of building projects with design and production of prototype houses, and multifamily developments. In addition, Honorata is involved in testing and development of new building products and systems, as well as production of BSC publications.

Prior to joining BSC, Honorata worked as an intern architect for a few prominent architectural firms in the Boston area where she gained experience on various building types such as institutional, educational, commercial, and residential. Her responsibilities included generating architectural drawings for all phases of design, 3D images of buildings and interior spaces, as well as research of sustainable building methods and materials.

Honorata is an active member of the Boston Chapter of Emerging Green Builders, an organization dedicated to students and young professionals to share ideas, resources and events about the evolving green building industry. Her role on the Planning and Outreach Committees involves organizing various networking events, reaching out to new members interested in joining the organization as well as production of marketing materials.
